

DO NOT start messing with my XM satellite radio. It is the best thing to happen to radio that I can remember. Satellite radio makes the drive in my car great and gives me things that regular radio can't. DON'T MESS WITH IT..... change is good and regular radio needs to just deal with it. As well I pay for my XM and don't particularly like the fact that someone is trying to tell me what I can and can't listen to. The FCC needs to reject the NAB's petition 04-160. Thanks....
